Biophys. Res. Commun. 258:260-264 (1999).

FUNCTION: May play an important role in a common pathway leading to programmed neuronal cell death. Does not appear to function in the programmed death of non-neuronal cells. May serve as an endogenous antagonist competing for substrate with functional kinases that act to promote neuronal cell survival.

TISSUE SPECIFICITY: Detected only in the lung. Not detected in the heart, brain, spleen, liver, skeletal muscle, kidney and testis.

INDUCTION: Expression induced during programmed cell death evoked in neuronal cells by NGF-depletion.

SIMILARITY: Contains 1 protein kinase domain.

IN VITRO, IS AB
TO PHOSPHORYLATE CDC25C AND CASEIN.

CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
SUBUNIT: BINDS TO THE CALCIUM/INTEGRIN-BINDING PROTEIN (CIB). TH
INTERACTION PROBABLY OCCURS VIA THE POLD-BOX DOMAIN.

SUBCELLULAR LOCATION: Membranc-associated.
TISSUE SPECIFICITY: TRANSCRIPTS ARE HIGHLY DETECTED IN PLACENTA,
LUNG, POLLOWED BY SKELETAL MUSCLE, HEART, PANCREAS, OVARIES AND
KIDNEY AND WEAKLY DETECTED IN LIVER AND BRAIN. MAY HAVE A SHORT
HALP-LIVE. IN CELLS OF HEMATOPOIETIC ORIGIN, STRONGLY AND
EXCLUSIVELY DETECTED IN TERMINALLY DIFFERENTIATED MACROPHAGES.
TRANSCRIPTS EXPRESSION APPEARS TO BE DOWN-REGULATED IN PRIMARY
TRANSCRIPTS EXPRESSION APPEARS TO BE DOWN-REGULATED IN PRIMARY

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SEQUENCE OF 7-620 FROM N.A.

C STRAIN-ATCC 32354 / B-311;

A Petter R., Kwon-Chung K.J.;

L Submitted (MAR-1996) to the EMBL/GenBank/DDBJ databases.

C --- FUNCTION: ESSENTIAL FOR RELEASE FROM GLUCOSE REPRESSION. IT

INTERACTS AND HAS FUNCTIONAL RELATIONSHIP TO THE REGULATORY

PROTEIN SNP4. COULD PHOSPHORYLATES CATS (BY SIMILARITY).

SUBCELLULAR LOCATION: ASSOCIATED WITH THE NUCLEAR MEMBRANE (BY SIMILARITY).

SIMILARITY: BELONGS TO THE COURTS OF

-I- FUNCTION: SERINE/THREONINE PROTEIN KINASE INVOLVED IN REGULATING PHASE FUNCTIONS DURING THE CELL CYCLE. MAY ALSO BE PART OF THE SIGNALING NETWORK CONTROLLING CELLULAR ADHESION. IN VITRO, IS ABLED TO PHOSPHORYLATE CDC25C AND CASEIN (BY SIMILARITY).

-I- CATALYTIC ACTIVITY: ATP + a protein a phosphoprotein.
-I- SUBUNIT: BINDS TO THE CALCIUM/INTEGRIN-BINDING PROTEIN (CIB). THI INTERACTION PROBABLY OCCURS VIA THE POLO-BOX DOMAIN (BY

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CNK OR PNK.
                                                                                                                                                                                                                                                                                                                                              PUNCTION: SERIUS/THERONINE PROTEIN KINASE INVOLVED IN REGULATING PUNCTIONS DURING THE CELL CYCLE. MAY ALSO BE PART OF THE SIGNALING NETWORK CORTROLLING CELLULAR ADHESION. IN VITRO, IS ABLED TO PHOSPHORYLATE CDC25C AND CASEIN (BY SIMILARITY).

CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein. SUBUNIT: BINDS TO THE CALCIUM/INTEGRIN-BINDING PROTEIN (CIB). THI INTERACTION PROBABLY OCCURS VIA THE POLO-BOX DOMAIN.

SUBCELLULAR LOCATION: WHEN INDUCED, IT TRANSLOCATES INTO THE DENDRITES OF ACTIVATED NEURONS.

TISSUE SPECIFICITY: CONSTITUVELY EXPRESSED IN POST-MITOTIC
                                                                                                                                                                                                                           INDUCTION: BY THE INTENSE ACTIVITY ASSOCIATED WITH SEIZURES. PTM: PHOSPHORYLATED AS CELLS ENTER MITOSIS AND DEPHOSPHORYLATED CELLS EXIT MITOSIS (BY SIMILARITY).

SIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES. CDC5/POLO SUBFAMILY.

SIMILARITY: Contains 2 POLO box domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           297

-I. FUNCTION: THIS KINASE MAY PLAY A ROLE IN NEUROTRANSMISSION.
-I. CATALYTIC ACTIVITY: ATP + protein = ADP + O-phosphoprotein.
-I. ENZYME REGULATION: AUTOPHOSPHORYLATION OF CAM-KINASE II PLA-
IMPORTANT ROLE IN THE REGULATION OF THE KINASE ACTIVITY.
-I. SUBUNIT: COMPOSED OF FOUR DIFFERENT CHAINS: ALPHA, BETA, GJ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   BINDING

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

GENERAL INFORMATION:

APPLICANT: Rosen et al.

TITLE OF INVENTION: Nucleic Acids, Proteins and FILE REPERENCE: PA106

CURRENT APPLICATION NUMBER: US/09/925,301

CURRENT FILING DATE: 2001-08-10

PRIOR APPLICATION NUMBER: PCT/US00/05882

PRIOR PILING DATE: 2000-03-08

PRIOR PILING DATE: 1090-03-08

PRIOR FILING DATE: 1999-03-12

NUMBER OF SEQ ID NOS: 1694

SOFTMARE: PATENTIN Ver. 2.0

SEQ ID NO 1102

LENGTH: 233

TYPE: PRT

ORGANISM: Homo sapiens
